Digest

Export Growth Slows in 1989 (see p. 2) U.S. agricultural exports rose 8 percent in 1989 to \$39.9 billion, a \$2.9-billion increase, but well below 1988's \$8.4-billion expansion, which was the largest in the 1980's. The lingering effects of the drought that began in 1988 slowed 1989's growth, particularly for bulk products. Although largely unaffected by the drought, export growth also slowed for high-value products.

U.S. Imports Sluggish in the 1980's (see p. 6) The value of imported agricultural products grew at a rate of 2 percent per year during the 1980's, well below the 13-percent annual pace of the 1970's. The decade ended with record imports of \$21.5 billion in 1989. The 1980's were marked by a global recession, falling commodity prices, and an appreciating dollar.

Major World Markets for Agricultural Products (see p. 10) Major markets for agricultural imports remained essentially the same during 1976-88. The 10 largest agricultural import markets were West Germany, Japan, the United States, Italy, the United Kingdom, France, the Soviet Union, the Netherlands, Belgium-Luxembourg, and Canada. These countries accounted for about 60 percent of the value of global agricultural imports.

Export Growth Slows in 1989

U.S. agricultural exports rose 8 percent in 1989 to \$39.9 billion, a \$2.9-billion increase, well below 1988's \$8.4-billion expansion, which was the largest in the 1980's. The lingering effects of the drought that began in 1988 slowed 1989's growth, particularly for bulk products. Although largely unaffected by the drought, export growth also slowed for high-value products (HVP) in 1989.

Smaller increases in export volume and prices for bulk commodities were the most important factors behind reduced export growth in 1989. Prices, particularly for grains, were generally higher in 1989, but aggregate export volume rose only 4 million tons as smaller oilseed exports largely offset larger grain exports. In contrast, 1988 export volume jumped 15 million tons from the year before, despite drought-reduced production. The National Agricultural Statistics Service (NASS) index of all crop production fell from 106 to 89 in 1988 because of drought but rebounded to 103 in 1989. The resurgence extended to each of the broad categories of crops--feed grains, forage, food grains, and oil crops--that suffered in 1988, driving prices for these commodities down late in the year.

Export value exceeded year-earlier levels during the first part of 1989 due to drought-induced price hikes. By June, the total value of U.S. agricultural exports exceeded the year-earlier cumulative total by 14 percent. However, prices fell as harvest prospects improved, and exportable supplies dwindled during the summer months. In addition, overseas buyers slowed purchases in anticipation of lower prices after harvest. During the last half of 1988, U.S. stocks remained relatively high, prices were driven up sharply, and overseas customers moved quickly in some cases to secure supplies.

Grain Exports Lead All Commodities

Grain exports rose \$3.2 billion in 1989, with volume about 8 million tons higher, but still sharply below 1988's rise of \$4.5 billion and 17 million tons. Wheat export volume fell 4 million tons, but corn posted a 10-million-ton gain. Wheat prices, however, climbed 33 percent compared with 7 percent for corn. Wheat prices received additional impetus from smaller bonuses under the Export Enhancement Program (EEP) and from tighter world supplies compared with corn. Before the U.S. drought raised world wheat prices, the average export price of U.S. wheat was reduced from comparable market prices by EEP

bonuses, which lowered the cost of U.S. wheat to targeted overseas customers to ensure a larger U.S. market share in competition with the European Community (EC). As world markets tightened, exporter competition relaxed and bonuses fell, bringing average U.S. export prices closer to market prices. Since market prices were already higher due to tighter supplies, wheat export prices rose especially strongly.

The Soviet Union accounted for most of 1989's 8-million-ton increase in total U.S. grain exports. The Soviet Union also accounted for most of the decline in wheat exports as well as the gain in corn exports. U.S. wheat and corn exports to the Soviet Union moved in opposite directions as Soviet and competitor production shifted, reducing Soviet demand for U.S. wheat and increasing it for corn. U.S. corn exports were also boosted by an increased Soviet emphasis on livestock production that has resulted from the recent political and economic changes there.

Oilseed and product exports fell \$1.4 billion as volume shrank and prices ended mixed. Reduced exports were also reported for live animals, dairy products, hides and skins, animal fats, and nuts. However, exports rose for meat, vegetables, cotton, tobacco, and fruit.

Growth Slows for High-Value Product Exports

HVP exports rose less than \$1 billion to about \$19 billion in 1989, their smallest increase since 1986. The slowdown in HVP export growth mirrored the performance of nonagricultural exports, which grew just 14 percent in 1989 compared with 26 percent in 1988. HVP agricultural exports have several characteristics in common with nonagricultural products, such as a high degree of value-added, an orientation toward developed markets, and a similar response to macroeconomic trends. Nonagricultural exports were restrained by slower growth in foreign developed economies and by unfavorable shifts in exchange rates. Agricultural HVP export growth, however, was slowed by other factors as well.

U.S. exports of animal products, for example, fell below 1988's \$6.4 billion, despite increased exports to developed markets. The decline was slight but marked the first drop in U.S. exports of animal products since 1985. The decline was also significant because animal products represent the largest single category of HVP exports, and with a 55-percent increase in export value between 1985 and 1988, had been a significant source of export strength.

Animal product exports fell in 1989 as Mexico's purchases leveled off and U.S. overseas donations of dairy products under Commodity Credit Corporation (CCC) programs were essentially terminated. Cattle hide and tallow prices fell, and the EC banned imports of beef produced with growth-stimulating hormones in February 1989.

Mexico was the fastest growing market for U.S. animal product exports in 1988. Exports to Mexico rose \$384 million in 1988, a 44-percent increase, as the Mexican Government sought to ensure sufficient food supplies to blunt price increases. Less restrictive import regulations and other government programs in Mexico began boosting animal product imports from the United States in midyear, eventually bringing 1988's total to \$830 million. Imports began tapering off during 1989 but remained at \$830 million for the whole year.

With sales to Mexico stagnant, Japan resumed its role as the fastest growing market for U.S. exports of animals and animal products. Boosted largely by increased beef sales, U.S. animal product exports to Japan rose almost \$200 million to \$2.2 billion. Japan's willingness to relax beef import quotas deserves much of the credit for this increase, but imports of cuts of beef not covered by quotas also increased, as did imports of U.S. pork and poultry meat. Increased beef import quotas also helped raise animal product exports to South Korea, offsetting the impact of lower prices for cattle hides. However, increased exports to East Asia failed to offset lower exports to other destinations, including the EC, Africa, and the rest of Asia.

Although meat exports rose in 1989 because of sales to East Asia, a new EC policy significantly restrained growth and is likely to affect U.S. meat exports in the future. The EC prohibited use of growth-stimulating hormones in European beef production in 1988. In the course of U.S.-EC negotiations, the 1989 import ban was relaxed to permit shipments of meat intended for pet food. Negotiations also resulted in a framework that would potentially allow U.S. producers not using the growth stimulants in question to continue exporting beef for human consumption to the EC, but the technical requirements have proved daunting to virtually all producers. While the EC has traditionally accounted for about 40 percent of all U.S. variety meat exports, only 6 percent of all 1989 shipments went to the EC. The value of variety meat exports to the EC fell from \$106 million in 1988 to \$23 million.

Falling CCC Stocks Curtail Dairy Exports

The largest identifiable decline of any single group of animal products came in dairy products, which fell \$170 million to \$400 million. Lower dairy product exports were the primary source of lower animal product exports to most of the regions cited above. During much of the 1980's, the United States donated surplus CCC stocks of dairy products to needy domestic consumers and as overseas food aid. Overseas food aid moved under Title II of Public Law 480 (Food for Peace), and under Section 416 of the Agricultural Act of 1949, as amended. These stocks had been acquired in the course of managing domestic supplies of dairy products in accordance with the goals of relevant farm legislation. Through donations of stocks, the CCC reduced the costs associated with holding stocks and increased exports without additional budgetary outlays in the case of Section 416. However, during 1989, CCC stocks fell to the point where exports were no longer feasible and donations were virtually halted.

With the termination of Title II and Section 416 dairy product donations, dairy product exports to many destinations dropped substantially. Shipments to South Asia fell from \$63 million to \$225,000; shipments to North Africa from \$27 million to \$1 million; and shipments to Sub-Saharan Africa from \$61 million to \$6 million. Shipments were also lower to the Philippines, Thailand, Iraq, Peru, Bolivia, and Central America. Commercial sales were less affected, and dairy exports to developed countries were virtually unchanged at \$70 million. Recent years have seen a resurgence of commercial U.S. dairy exports as the EC reduced milk production and stocks.

HVP exports other than animal products continued to perform well in 1989. Essential oils, beverages excluding juices, seeds, nursery and greenhouse products, and other miscellaneous vegetable products all surpassed gains of a year earlier. Vegetable exports maintained their 1988 pace, and fruit exports slowed somewhat while continuing to grow. Fruit juice exports stagnated, but nuts were the only significant category suffering a year-to-year loss.

HVP exports continued to benefit from the favorable changes in exchange rates that occurred between 1985 and 1988, and from continued favorable movement in the U.S. exchange rate with Canada, one of the biggest customers for horticultural products. U.S. Imports Sluggish in the 1980's

The value of imported agricultural products grew at a rate of 2.5 percent annually during the 1980's, well below the 13-percent level registered during the 1970's (table 5). The decade, however, ended with record imports in 1989 of \$21.5 billion.

The early 1980's, marked by a global recession, falling commodity prices, and an appreciating dollar, saw the United States tighten import controls in some areas (sugar quotas), maintain them in other areas (the Meat Import Law, cheese and peanut quotas), and reduce them in still other areas (live cattle tariffs). Import duties fell in real terms for most fruits and vegetables, since most of them were denoted in cents per pound rather than as a percentage of the total value (*ad valorem*). The growing awareness of unfair trade practices, many of which were brought out in the Uruguay Round of the General Agreement on Tariffs and Trade (GATT), created an improved atmosphere for U.S. importers.

Highlighting the 1980's

It was a decade in which Canada and Mexico surpassed Brazil as the largest supplier of agricultural commodities to the United States (Foreign Agricultural Trade of the United States, Nov./Dec. 1989). The decade ended with the International Coffee Organization (ICO) going "free market" by abandoning the export quota system. The International Cocoa Organization (ICCO) could not settle important issues among its members, as global cocoa production set records in 7 of the 10 years. The Caribbean Basin Initiative, signed in 1983, allows 27 Caribbean and Central American countries duty-free access to U.S. markets for a minimum of 12 years.

Table 5—Growth in the value of U.S. agricultural imports, by decade, 1939-89

Period	Annual growth rate
	<u>Percent</u>
1939-49	10.0
1949-59	3.5
1959-69	1.9
1969-79	12.9
1979-89	2.5

The United States became more aware of its trade balance in the 1980's. In May and July of 1986, agricultural imports exceeded exports for the first time since August 1971. The decade began with a trade surplus of \$23.9 billion, ended at \$16.5 billion, and in between fell as low as \$4.8 billion in 1986. The prospect of foreign agricultural products displacing domestic output influenced Congress to pass the Agricultural Trade and Competitiveness Act of 1988. Section 4502 of that act calls for ERS to publish, on a regular basis, import shares of U.S. food consumption (Foreign Agricultural Trade of the United States, July/Aug. 1989).

Competitive Imports Show Growth

Imports of fruits, vegetables, and grains showed the most consistent increases during the 1980's, even though these commodities are produced commercially in the United States (table 6). Imports of competitive commodities grew at an annual rate of 5 percent through the 1980's, setting records in each of the last 7 years. Despite the cutback in sugar imports from 5 million tons in 1979 to less than 2 million tons in 1989 due to the imposition of an import quota in 1982, growth in the 1980's revolved around competitive products.

Chilean Fruit Exports Soar

Perhaps the most vivid example of exporters moving into the U.S. market was Chilean fruit. In 1979, Chile shipped \$33 million of fresh grapes, apples, peaches, nectarines, and plums to the United States. Fresh fruit then accounted for 70 percent of all Chilean agricultural exports to the United States. By 1989, this total had climbed to \$255 million, accounting for two-thirds of the total. A cyanide scare in Chilean grapes during February and March 1989 temporarily reversed the sharp upward trend. Chilean fruit continues to be imported because of its availability during the winter months when U.S. output is minimal.

Another example of an export getting a larger foothold in the U.S. market was Brazilian frozen concentrated orange juice (FCOJ). In 1976, Brazil was virtually the only exporter of FCOJ to the United States, shipping \$9 million. By 1979, the Brazilian total had jumped to \$104 million, and by 1985, the figure reached \$670 million before falling to \$370 million in 1989. Brazil supplies almost 40 percent of U.S. orange juice consumption. Following Brazil's success, Mexico also increased its market share in recent years. Mexico had a 1-percent share in 1985 but has since increased that share to 12 percent.

The value of fresh fruit imports, including bananas, grew at an annual rate of 10 percent in the 1980's; quantity imports rose slightly less than half that rate. In contrast, nearly all of the gain in imports of processed fruits, including fruit juices, was in volume. Argentina, West Germany, the Philippines, and Austria are among several countries shipping large amounts of apple, pear, and pineapple juice to the United States.

U.S. Vegetable Market Expands Imports

Mexico provided nearly 70 percent of all U.S. fresh vegetable imports in 1989, down from 85 percent in 1979. Tomatoes, cucumbers, peppers, eggplant, and onions were among the 1.9 million tons of fresh vegetables that came across the border in 1989. Canada has doubled its market share since 1979, and several other countries in Latin America, Western Europe, and Asia also gained market share in the U.S. vegetable market at the expense of Mexico.

Both fresh and processed vegetable imports grew 10 percent a year, on average, throughout the 1980's. The primary processed vegetables during 1989 were tomatoes (including paste and sauce) (\$161 million), olives (\$145 million), and canned mushrooms (\$138 million).

United States Becomes Net Importer of Oats

When the decade began, the United States was a net exporter of oats as well as other grains. In recent years the United States has become a net importer of oats. High demand for oat bran in the United States and a change in the U.S. price support policy pertaining to oats and barley has contributed to higher oat imports since 1985. U.S. imports reached a record 1.3 million tons in 1989, primarily from Canada, Sweden, Finland, and Argentina, to fill the gap of a 41-percent drop in U.S. oat production in 1988. Altogether, the United States imported \$1.2 billion of grain products in 1989 compared with \$316 million in 1979. This included pasta and noodles (\$118 million), biscuits

and wafers (\$340 million), and animal feeds (\$246 million).

Fresh Pork, Live Hog Imports Climb

The United States has imported fresh pork and live hogs from Canada for many years but never on the scale that it did during the 1980's. From 136,000 head in 1979 (60,000 head below the record set in 1974), hog imports from Canada jumped to 1.3 million head by 1984. The United States applied a countervailing duty to live hog imports from Canada in 1985 after the U.S. International Trade Commission (USITC) determined that Canada subsidized hog exports. Hog imports fell to 504,000 head in 1986. The duty was reduced in 1988. Imports climbed back up to 1.1 million head by 1989 when a western Canadian meatpackers' strike resulted in shipments to U.S. slaughtering plants.

Processed pork imports ranged between 120,000 and 160,000 metric tons throughout the 1980's. Fresh and frozen pork, however, climbed from 20,000-30,000 tons in the 1970's to 302,000 tons in 1987. A countervailing duty was applied in 1989 and, with the meatpackers' strike, caused imports to fall to 225,000 tons. Although production is expected to be 5 percent lower in 1990, Canadian pork producers are at the point in the hog cycle in which slaughter is high and they are searching for markets.

Noncompetitive Imports Show Mixed Results

While some noncompetitive imports (tea, spices, bananas, and plantains) showed growth during the decade, coffee clearly dominated this category. The largest imported commodity, coffee accounted for 12 percent of total agricultural imports. As an illustration of the magnitude of change in the coffee market, U.S. imports fell by \$1.7 billion in 1987, almost entirely because of a drop in price as the result of a large Brazilian crop. Major World Markets For Agricultural Products

Major importers of agricultural products remained essentially unchanged during 1976-88. The 10 largest agricultural import markets were West Germany, Japan, the United States, Italy, the United Kingdom, France, the Soviet Union, the Netherlands, Belgium-Luxembourg, and Spain. These countries accounted for about 60 percent of the value of world agricultural imports. In 1988, they imported more than \$193 billion of farm products (62 percent of all total farm imports). China replaced Canada as the 10th largest market in 1980, and Saudi Arabia replaced Canada in 1981-84. Canada regained the 10th position in 1985 when Saudi Arabia greatly reduced its imports due to declining oil revenues and general agricultural demand. Spain moved ahead of Canada in 1988.

Changing Markets: Growth and Decline

Developing countries, primarily in the Middle East, accounted for much of the growth in agricultural imports during 1976-88. Saudi Arabia ranked number 26 in 1976, number 10 in 1981-85, and number 18 in 1988. Egypt, with imports valued at \$3.2 billion in 1980-84 and \$5.2 billion in 1988, moved from number 21 in 1976 to number 12 in 1984 and 1985 and to number 15 in 1988. Iraq, with imports valued at \$1.5 billion in 1976, moved from number 44 to number 25 in 1988.

Markets outside the Middle East also grew. Mexico moved from number 46 in 1976 to number 22 in 1988 on the strength of \$2.7 billion in imports in 1988. South Korea jumped from number 22 in 1974 to number 15 in 1984 and to number 14 in 1988 with imports valued at \$5.3 billion. Taiwan rose steadily, from number 23 in 1976 to number 17 in 1988. China, ranking 10th in 1980, fell to number 18 in 1984 and to number 25 in 1986 because it increased domestic production and reduced imports by 60 percent. China increased its rank to number 13 in 1988 because of rising demand for wheat imports.

Import values in Poland and East Germany, the two largest markets in Eastern Europe, fell because of foreign exchange shortages. Imports in East Germany fell 2.5 percent between 1984 and 1988, accelerating the change from number 15 in 1976 to number 29 in 1988. Poland's market size, like East Germany's, declined during the period. Poland shifted from number 14 in 1976 to number 34 in 1988, dropping most sharply when its agricultural imports fell 18 percent from \$2.2 billion in 1984 to \$1.8 billion in 1988.

U.S. Market Shares

The U.S. market share of world agricultural imports dropped from the 1980-84 average of 16.8 percent to 11.8 percent (\$313.5 billion) in 1988, the lowest level since 1970 when the world market for agricultural products was just \$56.6 billion. In 1988, the U.S. market share fell in 44 of the 50 major agricultural markets, increasing only in Saudi Arabia, Algeria, Mexico, India, Pakistan, and Bulgaria. The U.S. market share fell 20 percent or more in 27 of the 50 major markets between 1984 and 1988. The largest declines in U.S. market shares were registered in Iran (100 percent); Libya (100 percent); Uruguay (99 percent); Czechoslovakia (88 percent); Brazil (80 percent); Portugal (70 percent); Belgium-Luxembourg (63 percent); Spain, Indonesia, and Switzerland (51-59 percent each); East Germany, the Netherlands, Italy, and Norway (40-47 percent each); and Denmark, China, France, Egypt, Greece, and United Arab Emirates (30-34 percent each). The U.S. market share in the European Community (EC) fell from 10.1 percent in 1980-84 to 5.3 percent in 1987-88.

The United States was the largest agricultural product supplier (at least 20 percent) in 12 of the 50 major markets in 1988. These countries included Mexico (82 percent); South Korea, Taiwan, and Venezuela (40-43 percent each); Pakistan, Canada, and Israel (33-36 percent each); Japan and Algeria (25-28 percent each); and Iraq, India, and Thailand (20-23 percent each). These countries imported \$19 billion, about 51 percent, of all U.S. agricultural exports in 1985.

Major Wheat and Wheat Flour Markets

Import markets for wheat and wheat flour (in wheat equivalents) in 1979-88 were highly concentrated in a few countries. For example, the 10 leading markets for wheat and wheat flour accounted for over 60 percent of the world import volume in 1980-88, while 6 of those accounted for over 50 percent. The 10 leading markets were the Soviet Union, China, the EC, Egypt, Japan, Brazil, Algeria, South Korea, Iraq, and Poland. The Soviet Union, by far the largest single market, accounted for about 20 percent of the volume in 1982-88. China and the EC were the second and third largest markets in 1979-88, with each accounting for over 10 percent in 1974-82 and in 1987-88.

However, some trends changed in 1982-88 in each of these markets. Import volume and the relative size of the market in the EC increased, while they decreased in China in 1985-86 before doubling in 1987-88.

Increased domestic production in China in 1985-86 greatly reduced wheat import volume to 5.9 million tons, about half the 1983-84 level. Import volume, however, increased 50 percent to 14.4 million metric tons and enlarged China's market share from 5.9 percent in 1985-86 to 12.7 percent. The level of trade increased in the EC from 10 million tons in 1983-84 to 13 million tons in 1987-88, increasing its relative share of the world market to 11.5 percent in 1987-88. The growth in the EC market was due primarily to rapid growth in internal trade (intra-EC trade) rather than in imports from outside the EC (extra-EC trade). In fact, extra-EC trade (imports) dropped rapidly in 1982-88 and greatly reduced the real EC market share to 2-3 percent, a level equal to the market size in South Korea, Iraq, and Poland.

The U.S. market share of world trade was about 40 percent during the first half of the 1980's. However, the share dropped to 25.4 percent in 1985, the lowest since 1954. The U.S. market share rebounded in 1987-88 to 33 percent. The 1985-86 decline was traced to some major U.S. markets. Between 1981 and 1986, the U.S. market share in the Soviet Union dropped from 21 percent to 2.5 percent; China, from 58 percent to 12.2 percent; the EC, from 21.9 percent to 5.9 percent; Iraq, from 39.6 percent in 1983 to 22.3 percent; and South Korea, from 98 percent to 55.4 percent. The U.S. market share in the remainder of the top 10 markets (Egypt, Japan, Algeria, and Poland) either increased slightly or remained constant between 1984 and 1986. Since 1986, the U.S. market share has increased in all of the 10 major markets except Brazil.

Major Corn Markets

Major corn markets in 1979-88 were Japan, the Soviet Union, the EC, Spain, South Korea, Taiwan, and Portu-

gal. These seven markets accounted for about 73 percent of the world's corn market in 1979 and 1988. The three largest markets (Japan, the Soviet Union, and the EC) consistently have taken over 50 percent of the world's corn exports since 1979. The growth markets for corn were Japan, South Korea, and Taiwan. While the Soviet Union has been a highly volatile but increasing market during 1979-88, the EC has been a declining market in both trade volume and relative market size. The EC was the largest market in 1979, importing 17.2 million tons, but fell to third in 1985-88, importing 8.5 million tons. The decline in market size in the EC in 1979-88 was due to an increase in domestic production and intra-EC trade.

Major Soybean Markets

Major soybean markets in 1979-88 were the EC, Japan, Spain, Taiwan, and Mexico. These five markets have accounted for almost 75 percent of world soybean imports since 1979. The largest markets in 1979-88 were the EC (40 percent) and Japan (15-19 percent). The growth markets were Japan, Spain, Taiwan, Mexico, and South Korea, while the declining markets were the EC (46 percent in 1979 to 36.6 percent in 1986-88) and the Soviet Union (6.8 percent in 1979 to 5.1 percent in 1987-88).

The U.S. market share in the EC increased from 75.8 percent in 1979 to 88.1 percent in 1982 but dropped sharply to 69.5 percent in 1986-88. The U.S. market share in South Korea and Taiwan remained at 90 percent or more throughout 1979-88, while the U.S. market share in Japan fell from 94.5 percent in 1979-84 to 85.5 percent in 1985-88. The U.S. share of the soybean markets in Spain and Mexico declined in 1979-88. (Arthur B. Mackie, Agricultural and Trade Indicators Branch, Agriculture and Trade Analysis Division)

Farm Policy—In Plain English

Basic Mechanisms of U.S. Farm Policy, by USDA's Economic Research Service, demystifies and clarifies farm legislation and the programs spawned by it. It describes in plain English the key concepts of how U.S. farm policy works and takes you step-by-step through the major programs.

The report guides you from the ARP through the 0-92 program and all the major programs in between. Need to know how to calculate a deficiency payment? Look on page 11. How about turning a commodity certificate into cash money? It's here, too, page 56. Farmer considerations in deciding whether to redeem their grain from the FOR? Right on page 68.

For Novices and Experts Both, A Quick Way To Understand Farm Policy

Anybody with a need for a quick way to understand farm policy will benefit by this report. Farmers, food processors, exporters, importers, Congress and congressional staffs, lobbyists, trade association employees, and students from high school to graduate school are just some of the groups who can benefit. Even farm policy experts will want to order multiple copies of this informative report to help show their clients what it's all about.

Basic Mechanisms of U.S. Farm Policy uses easy-to-understand language and diagrams to describe farm policy mechanisms. Be sure to order enough for both your staff and your clients!

The complete array of farm policy mechanisms can appear overwhelming to anyone unfamiliar with the history of U.S. agricultural legislation. But each mechanism originated in Congress, reflecting public concerns about food, agriculture, and the needs of farmers.
